Portable Bathrooms

This list provides a starting point for assessors who are considering a portable bathroom for their client. These bathrooms are available from a range of suppliers but do not necessarily include all options available in New Zealand.

Information is current as of the date shown in the footer and subject to change.

Note that the options presented in this list are NOT suitable as permanent solutions.

Considerations for selection of a temporary shower and/or toilet:

- Submit all orders through the ACC Housing Modifications Service.
- Assessor reports must clearly outline the client's injury, functional strengths/limitations, and all home access barriers, including site details (location, size, slope, access) with photos.
- Document all potential solutions in a Housing Modification Assessment report (ACC257 or ACC263), e.g. natural supports, short-term options, adaptive equipment.
- Assess ongoing maintenance needs and whether the client/family can manage them (e.g. gas bottle refills, toilet cassette emptying), especially for purchased items.
- Compare hire vs purchase costs. For medium-term use, purchasing may be more cost-effective and reusable, particularly where permanent modifications may exceed 18 months.
